Database Tutorial for Beginners

I – Communication practice

Individually, prepare a short answer for each question below

1. What is the main goal of this tutorial?

2. What would most people first do to keep track of sales information when opening a new online store?

3. What kind of problems would one face while using a spreadsheet to record sales data?

4. Instead of using a single spreadsheet, what would be the first thing to do to avoid messy situations?

5. Once all the tables created, what is it necessary to do to build a much more organized data system?

6. In addition to organization, what is another interest in linking information between tables?

7. What does ERD stand for and what is the main purpose of this representation of a database?

8. In a ERD, how is a table represented and what are its columns called?

9. In a ERD, how are connections between tables represented?

10. What is Lucidchart?
